Course ID: CSE-499

Instructor: Sanzar Adnan Alam

Senior Lecturer

Department of Computer Science and Engineering

School of Engineering & Computer Science

Independent University, Bangladesh

Acknowledgements

First of all, I would like to thank almighty Allah for giving me the continuance and the capacity to do work difficult. I would like to thank the Independent University, Bangladesh (IUB) for offering an Internship program for me.

I would like to thank my honorable faculty **Sanzar Adnan Alam** Senior Lecturer, Dept. of Computer Science & Engineering for his supervision and extraordinary effort to make this internship program a success. His direction and support were the most imperative resources that prompted the finish of this venture.

I am also grateful to **Little Feat** for recruiting me as an intern. It is my benefit that I had the opportunity to do an internship in **Little Feat**, which is basically an online shop. I might likewise want to thank my external supervisor and my mentor Saiful Islam for allowing me to be a part of this organization. I am grateful for the unprecedented support and guidance, without this, the project would never be possible. I'm thankful to them for their continual constructive criticism and invaluable suggestions and help, which benefited me a lot at my intern.

Last but not the least, I would like to thank my parents and other family members for their eternal support given to me.

Tanjimul Hasan

Bashundhara R/A, Dhaka-1229

Subject: Submission of Internship Report

Dear Sir,

It is indeed my pleasure to submit the internship report to you for your kind appraisal. I have completed my internship report at Little Feat as a front-end web developer. During my internship, I got huge amount of support from the officials for preparing our report in time. The experiences I have gathered will be very helpful in the professional life.

I believe, this report will be quite interesting and fulfill your expectation. I have tried to give my best efforts to prepare a comprehensive report and hope that my report will satisfy you. I also would like to thank you again for allowing me to submit this report.

Yours most obediently,

Tanjimul Hasan

ID: 1621493

ABSTRACT

This internship report focuses on my contribution towards Little Feat as an intern and achievements from this internship program. The three-month internship program was carried out at Little Feat. I was given the responsibility of learning, implementing and analyzing the results of Web Development as I was assigned their Front-end Web Developer. The whole report deals with eight core chapters. At first in chapter one there is an introduction, background and objective. Then we go to Chapter two that focuses on Literature Review. Chapter three describes the Project Management. Chapter four focuses on Methodology. Chapter five focus Body of the project. Chapter six narrates Problem Analysis. Chapter seven describes conclusion and recommendation.

Introduction

1.1 Background of the work

An internship is a period of work experience offered by an organization for a limited period of time. It allows students and interns to the understanding of a real job framework and acquire knowledge about their particular field of work. The Internship works as a final polish for graduating students and provides them with the experience of an office environment. Internship opportunity provides the students a great chance to relate their theoretical knowledge with the competitive and tough real job market environment. Moreover, if the internship period is within the bachelor program and the students have to return to the academia after completing it, the skills that they have developed during the internship help them to gain a more sound academic result. Department of Computer Science & Engineering provides that glorious opportunity to their students of having an internship within their bachelor program.

In this report, I'm representing my working experience with a developer team. My Company Little Feat as an online shop. They want to build their website. so, I helped them to make it easy and join their company as a front-end web developer. I'm working on an e-commerce website using Html, CSS, JS, and the Web application named as "Little Feat".

It is an E-Commerce website where users can easily buy products online. The main benefit of this website to maintain tasked on time and doing their task easily. For developing this project, I used Html, CSS, JS.

1.2 Objectives

The main objective of our system is to make a user-friendly interface getting comfortable for shopping. With the increasing use of smart devices for shopping online, it has become more than mandatory for ecommerce businesses to go laptop, mobile So we need to create a responsive ecommerce website. Which can be easily browse from any smart devices. The framework permits buyers to pick their items which is accessible in our framework. They do not have to go shopping they can easily get the product of his choice from this website.

1.3 Scopes

After we complete developing this web application, our all features will be available. Our customers will be able to use this web application very easily. They can browse the entire web application without registration but if they want to buy something, they have to register and create account. They can create own account. They will be able to log in by email then they can search the product which they need. If they find the product of their choice, they can add it to the cart and order it.

Literature Review

2.1 Relationship with Undergraduate Studies

CSE-309 Web Application this course was in my undergraduate Studies. So the relationship is much stronger with my Undergraduate studies. In this course I got introduced to HTML, CSS, JavaScript language. It's such a great pleasure for me that university have a course like Web application development Since I have been working with HTML, CSS, JavaScript, to create a website. In this course we learn about basic Html, CSS, JavaScript, Bootstrap, PHP and so on. I have learned for this course how a website is created and how it works. This course has helped me a lot in my internship program. I got acknowledged also about GitHub from this course, that I had to use this in my Internship Program. For this reason, this course has been of great help.

2.2 Related Works

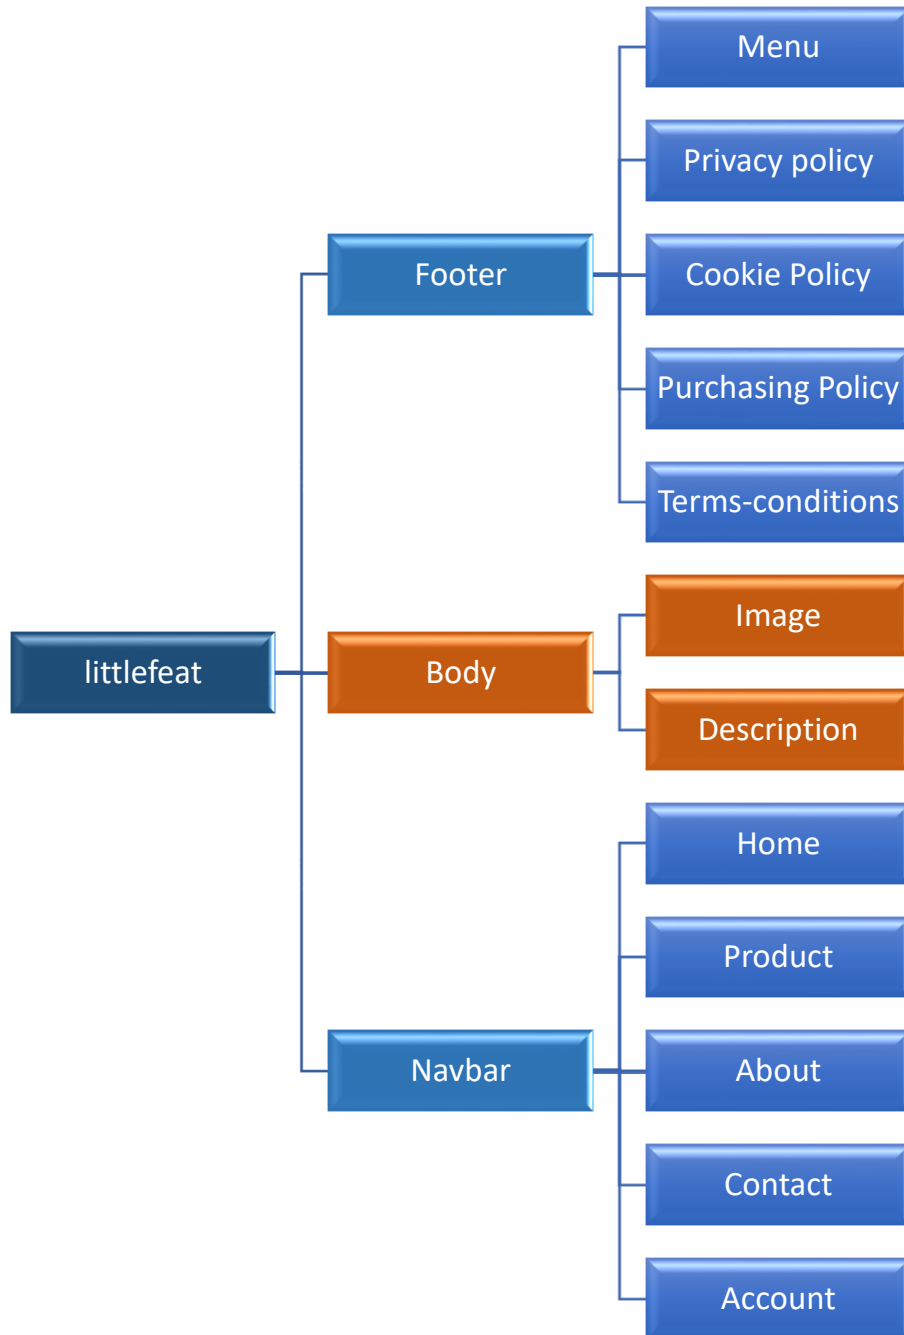

We collect information from various reputable websites before starting our project which gives us additional benefits. We look at the design and structure of this reputable websites . We get an idea of how to get started. Then we develop our site with basic needs and conditions.

There are many benefits to having a clear idea of this well-known websites. This helps a lot when a new developer wants to create a professional website. Because we can gain new knowledge from this reputable website.

Project Management and Financing

3.1 Work Break Down Structure (WBS)

Work breakdown structure (WBS) in project management is a method for completing a complex, multi-step project. It's a way to divide and conquer large projects to get things done faster and more efficiently.

3.2 Process Wise Time distribution

Clients give you less time to do your work not more than 2 weeks as usual so process wise time distribution is much more important to finish the project timely. Since I joined as a front-end developer, the company has set a time for our team so that we can finish our project on time.

If the team members of the group can submit their work before the deadline, the client will be satisfied but if anyone fail to submit their work on time then the project must be delayed and also it will make the client dissatisfied. Clients will give bad ratings which will have a bad effect for future work.

We organize online meetings and understand to find out who will do what. After our effective group meeting we are working our part that's reduce our time and we can done any schedule project easily. I was given two weeks to finish the first part and which I was done.

3.3 Gantt Chart

Now let's talk about the Gantt chart. I have always tried to give my work on time but in some cases a little more time is project needed. Here is my Gantt chart.

Task	Start date	End date	Duration
Task 1	20-02-21	03-03-21	11
Task 2	05-03-21	15-03-21	9
Task 3	16-03-21	21-03-21	5
Task 4	22-03-21	27-03-21	5
Task 5	01-04-21	04-04-21	3

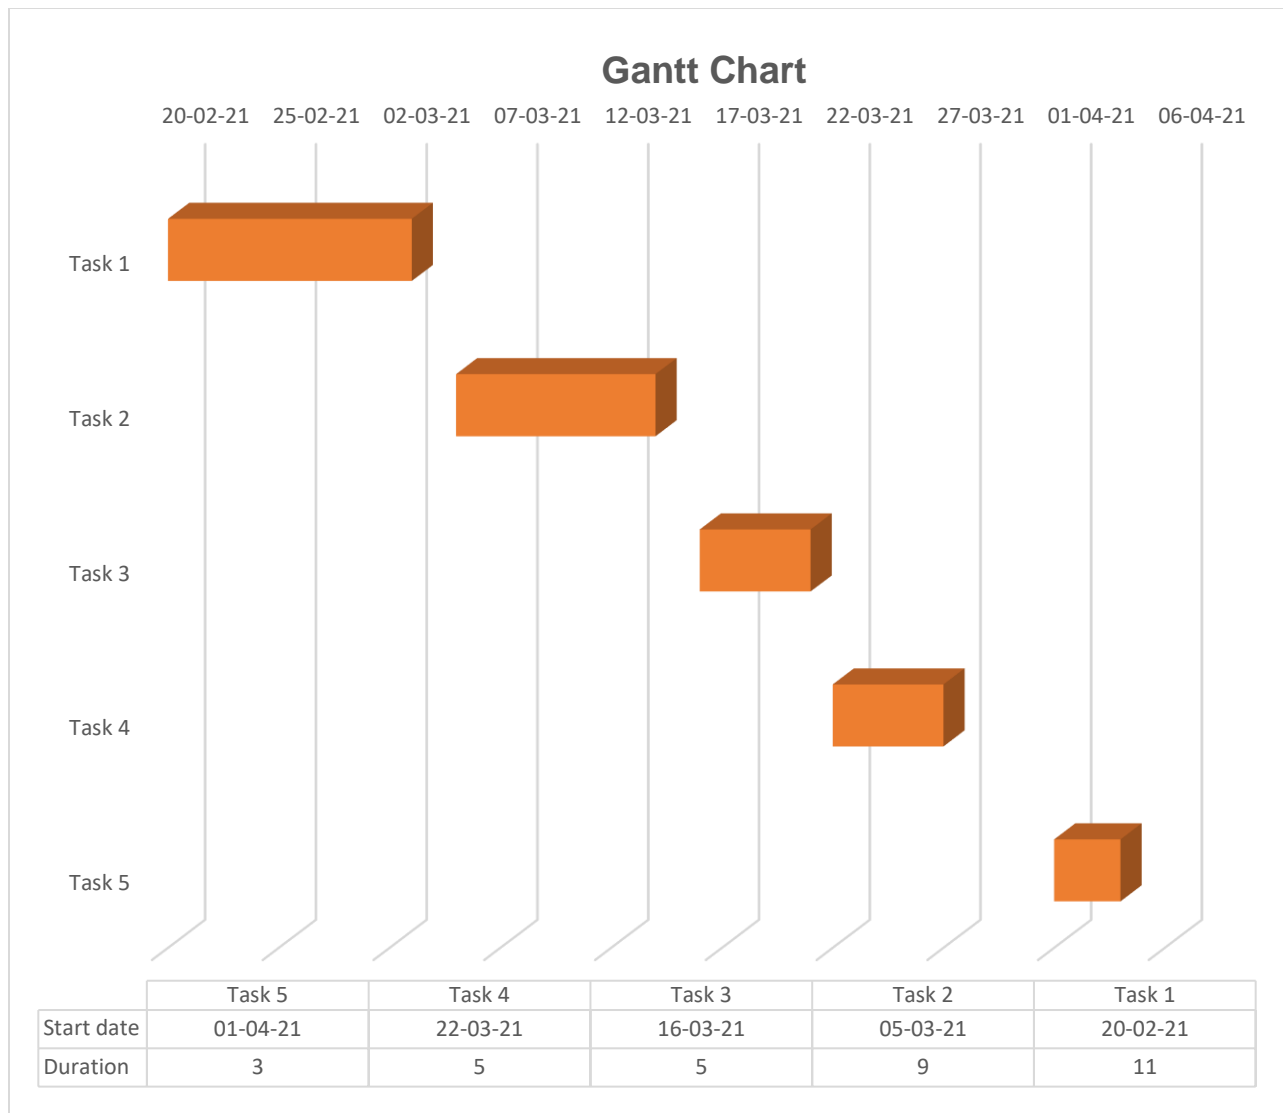

Figure : Gantt Chart

3.4 Activity wise Resource Allocation

As I worked remotely, so they did not need any resources to allocate for me. I have done the project just using my computer with internet .

3.4 Estimated costing

Since I have done the project by using the Microsoft visual studio, so I didn't need any costing. If I buy domain and hosting then it will cost some money.

Methodology

The internet and the Web application have had a great impact on the business world. The changing business landscape has also impacted on the requirements of system development methods. As a developer, it is important to be conscious of these aspects so that the appropriate methods, design approaches and tools are employed in the development process. Consumers can buy anything from online whatever they need. To meet the consumer needs, system must be developed with a customer focus. So, I am using Html, CSS, JavaScript to build this user-friendly project . It is responsible from any devices like laptops, computers, smartphones, tablets and so on. After using JavaScript, it can visible for any ratio of screen.

HTML

Web development can be done through HTML. The Hyper Text Markup Language, or HTML is the standard markup language for documents designed to be displayed in a web browser. It gives the structure of a Web page. Logo , image , and so on can add using this HTML code.

CSS

CSS is designed to enable the separation of presentation and content, including layout, colors, and fonts. CSS or Cascading Style Sheets is a style sheet language used for describing the presentation of a document written in a markup language such as HTML. Have to add stylesheet on HTML file rather than its not working or cannot give you much beauty which your project and clients want from you.

JavaScript

JavaScript is a dynamic computer programming language. JavaScript can update and change both HTML and CSS. Basically, we use java script in this project for removes the ratio problem so that it can access from any device like laptop, computer, mobile, and smart phone.

Body of the project

5.1 Work Description

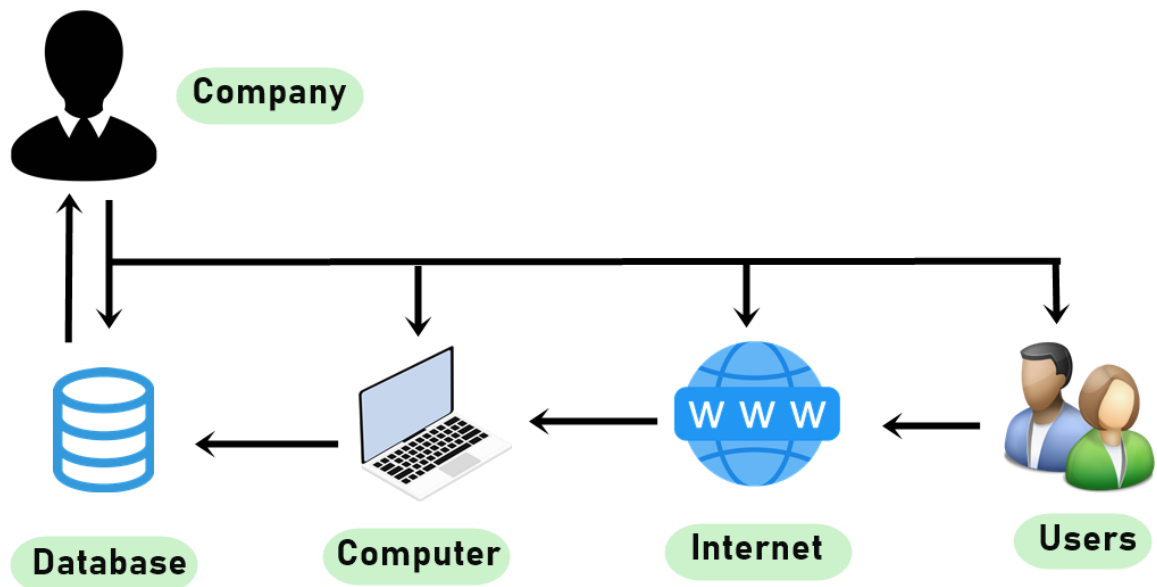

I did the project very simply. Firstly, I focus the user interface and then develop it. I create responsible home page and provide the main Little Feat home link. Add some text to the home page with the logo and images that the client wanted. Then we Add Products, About , Contact and Account pages.

Also Provides the Privacy policy ,Cookie Policy ,Purchasing Policy ,Terms-conditions. We also give their social media icon where consumer can be able to communicate easily.

5.2 Six elements analysis

System						
Process	Non-Com Hardware	Human	Computing Hardware	Software	Database	Communication & Network
Access	None	Customers -View the resources	Pc , Smart Device	-Browser -Website	Live Server	Internet
Communication	None	Customers -Through social media	Pc , Smart Device	-Browser -Website	Live Server	Internet

5.3 Rich Picture

Project as Engineer Problem Analysis

In the engineering profession, one of the most critical skills to possess is accurate and efficient problem solving. During my internship time, I have learned many things while working on it and at the same time faced many challenges.

Adapting to New Technologies : Being new in this field, the first two weeks were quite challenging for me to understand the process. I had to learn & adapt new language to build a website which was quite challenging for me. For this reason, initially, my learning curve has been substantially low. Despite this, I think I was able to keep up because of the proper guideline from my supervisor.

Knowing the Requirements: Since I was new in this field, it was difficult for me to understand the requirements. Because of that, I asked my supervisor again and again to understand the requirements. Though I suffered in the beginning I have successfully managed to overcome this problem with the help of the teammates.

Future work and conclusion

7.1 Future work

From the three months experience, I learned a lot of things about HTML, CSS and JS . In the future, I want to make a much better website using this and making it more interesting and more efficient for the user. I also try to make better in my demo project and also try to add new and interesting features.

7.2. Conclusion

The internship program has been a great helping the sense that it improved my team work capabilities. This internship program is a learning period of myself. I have gained new experience, skills, and meet up so many new people. At the companies it is important to function as a unit and respect the team mate's ideas and suggestions. Team discussions like brain storming sessions helped me identify and solve numerous problem issues which would have been impossible to solve otherwise. It is a pleasure for me working with Little Feat.

I would like to convey my thanks to my honorable faculty **Sanzar Adnan Alam** sir and CSE, IUB for providing me an opportunity to gain idea of the competitive environment in the professional field. Now I look forward to facing the upcoming challenges of the world.

Appendix

Now here I am revealing my source code. Home page codes are given here.

Cookie Policy

The acceptance of cookies is not a requirement for visiting the site. However we would like to point out that the use of the 'basket' functionality on the site and ordering is only possible with the activation of cookies. Cookies are tiny text files which identify your computer to our server as a unique user when you visit certain pages on the site and they are stored by your Internet browser on your computer's hard drive. Cookies can be used to recognize your Internet Protocol address, saving you time while you are on, or want to enter, the site. We only use cookies for your convenience in using the site (for example to remember who you are when you want to amend your shopping cart without having to re-enter your email address) and not for obtaining or using any other information about you (for example targeted advertising). Your browser can be set to not accept cookies, but this would restrict your use of the Site. Please accept our assurance that our use of cookies does not contain any personal or private details and are free from viruses.
